XP - N1985-150155

AB - J60126386 A waterproof sheet is covered on one or both sides with 5 to
500 g/m air impermeable waterproof film consisting mainly of at least
1 polymer selected from synthetic resin and rubber. The base fibre
sheet contains 0.1 to 200 g/m water insoluble water-absorbing
substance. The waterproof film has moisture permeability of at least
100, pref. at least 500 and most pref. at least 1000 g/m².24 hrs. (JIS
Z-0208) and contains dispersed solid particles of water absorbing
substance.

- Pref. polymers are silicone and urethane resins. The water absorbing
substance is at least one of pulp, cellulose deriv., saponified
polyacrylonitrile, saponified starch-acrylonitrile graft copolymer,
saponified intramolecularly crosslinked polymer of alkali metal salt
of acrylic acid, saponified copolymer of vinyl ester and ethylenically
unsatd. carboxylic acid or its ester, saponified vinyl ester-acrylic
ester copolymer and vinyl alcohol-acrylic acid salt copolymer.(0/0)
